Testable by turning off transmitter, ta

Notes:

Main contact element: The bright-dark switch is accessible by removing the blanking screw marked BL11. Switching to bright means that the output circuit of the main contact element is operated and the switching indicator lights up when the light emitted from the transmitter reaches the receiver after being reflected by the reflector.

Time delay: The optional delay time potentiometers located under the BL2 (turn-on (Ti) and turn-off delay (Ta)) for the main contact element (AK) increase by adjusting in a clockwise direction. The adjustable time is between 0s and the end value of the desired time range (1s, 3s or 10s).

Level indicator: The level indicator "DIANA" (optional, 4x LED red) indicates approximately 20-fold to 25-fold levels above the response threshold. It is not necessary for all DIANA LEDs to light up in order for the light barrier to function perfectly
